

NEO Cornerstones in Mathematics

How can we build an interactive and inquiry-led KS3 and KS4 Mathematics curriculum, similar to the style of our verse-al maths curriculum but that is centered round the 6 NEO Cornerstones rather than the 5 verse-al Ways of Knowing?

Here are the 6 cornerstones that we need to focus on. How can they be interpreted mathematically?

Cornerstones

The six Cornerstones are NEO's pedagogical framing layer, drawn from Bronfenbrenner's ecological model, Bowlby's attachment theory, and Dweck's work on growth mindset. Every NEO learning experience must serve at least one Cornerstone, both in what it teaches and in how it is taught.

Cornerstones are defined in the Teaching and Learning Policy v04.26 §1 and the Curriculum Rationale v2.0.

The six

- Connection – relationships, communication, understanding self and others
- Movement – physical engagement, embodied learning, the body as a site of knowledge
- Creativity – original expression, making, divergent thinking
- Reflection – self-awareness, critical inquiry, metacognition
- Rest – nervous system regulation, recovery, the right to pause
- Nutrition – the body, food, health, physical self-care
